

**Simple, robust protocol for wrapping hardware in web services.**

**Glue together commodity hardware you already have for automated, remote experiments.**

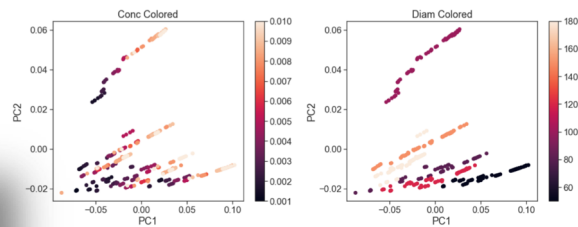

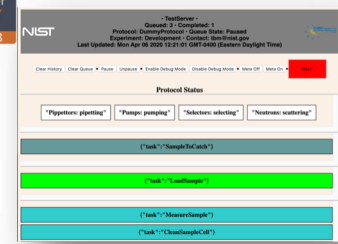

**Can we automate exploration to map combinatorically challenging phase spaces?**

**Can we automate dataset generation in order to leverage AI and ML tools?**

```

jupyter
In [ ]: cell_client.login('CellClient')
        load_uid = cell_client.enqueue(task_name='loadSample')
        cell_client.wait(load_uid)
    
```

**Rich datasets to train ML approaches to experiments.**
