

SCIENCE CABARET NEWS

Big Science, Small Problems! 03/26/14

Dr. Matthew Ward from the Cornell High Energy Synchrotron Source (CHESS) talked to us about X-ray absorption spectroscopy, nanostructures, nanomaterials, and how the Synchrotron works. The audience peppered Dr. Ward with questions about the equipment used, the types of materials he studies, the structure and layout of Cornell's Synchrotron and more. It was a fascinating evening.

And yes, the Synchrotron does conduct public tours! Those interested in touring the Synchrotron facility can contact xraise@cornell.edu or phone - Lora Hine or Erik Herman - 607.255.2319.
